## Introduction

This page contains all the user stories that I worked on and their status for all sprints.

## Sprint 1

This sprint consisted of us properly exploring the first version of the EnvScholar software, and familiarizing ourselves with the main goal of the project so far. The main goal so far is to properly implement a visualization technique of the environment ontology with a tree and node-graph structure. We explored various techniques and frameworks to do this and how to properly pre-process the data to do so.
